Stapler fate?

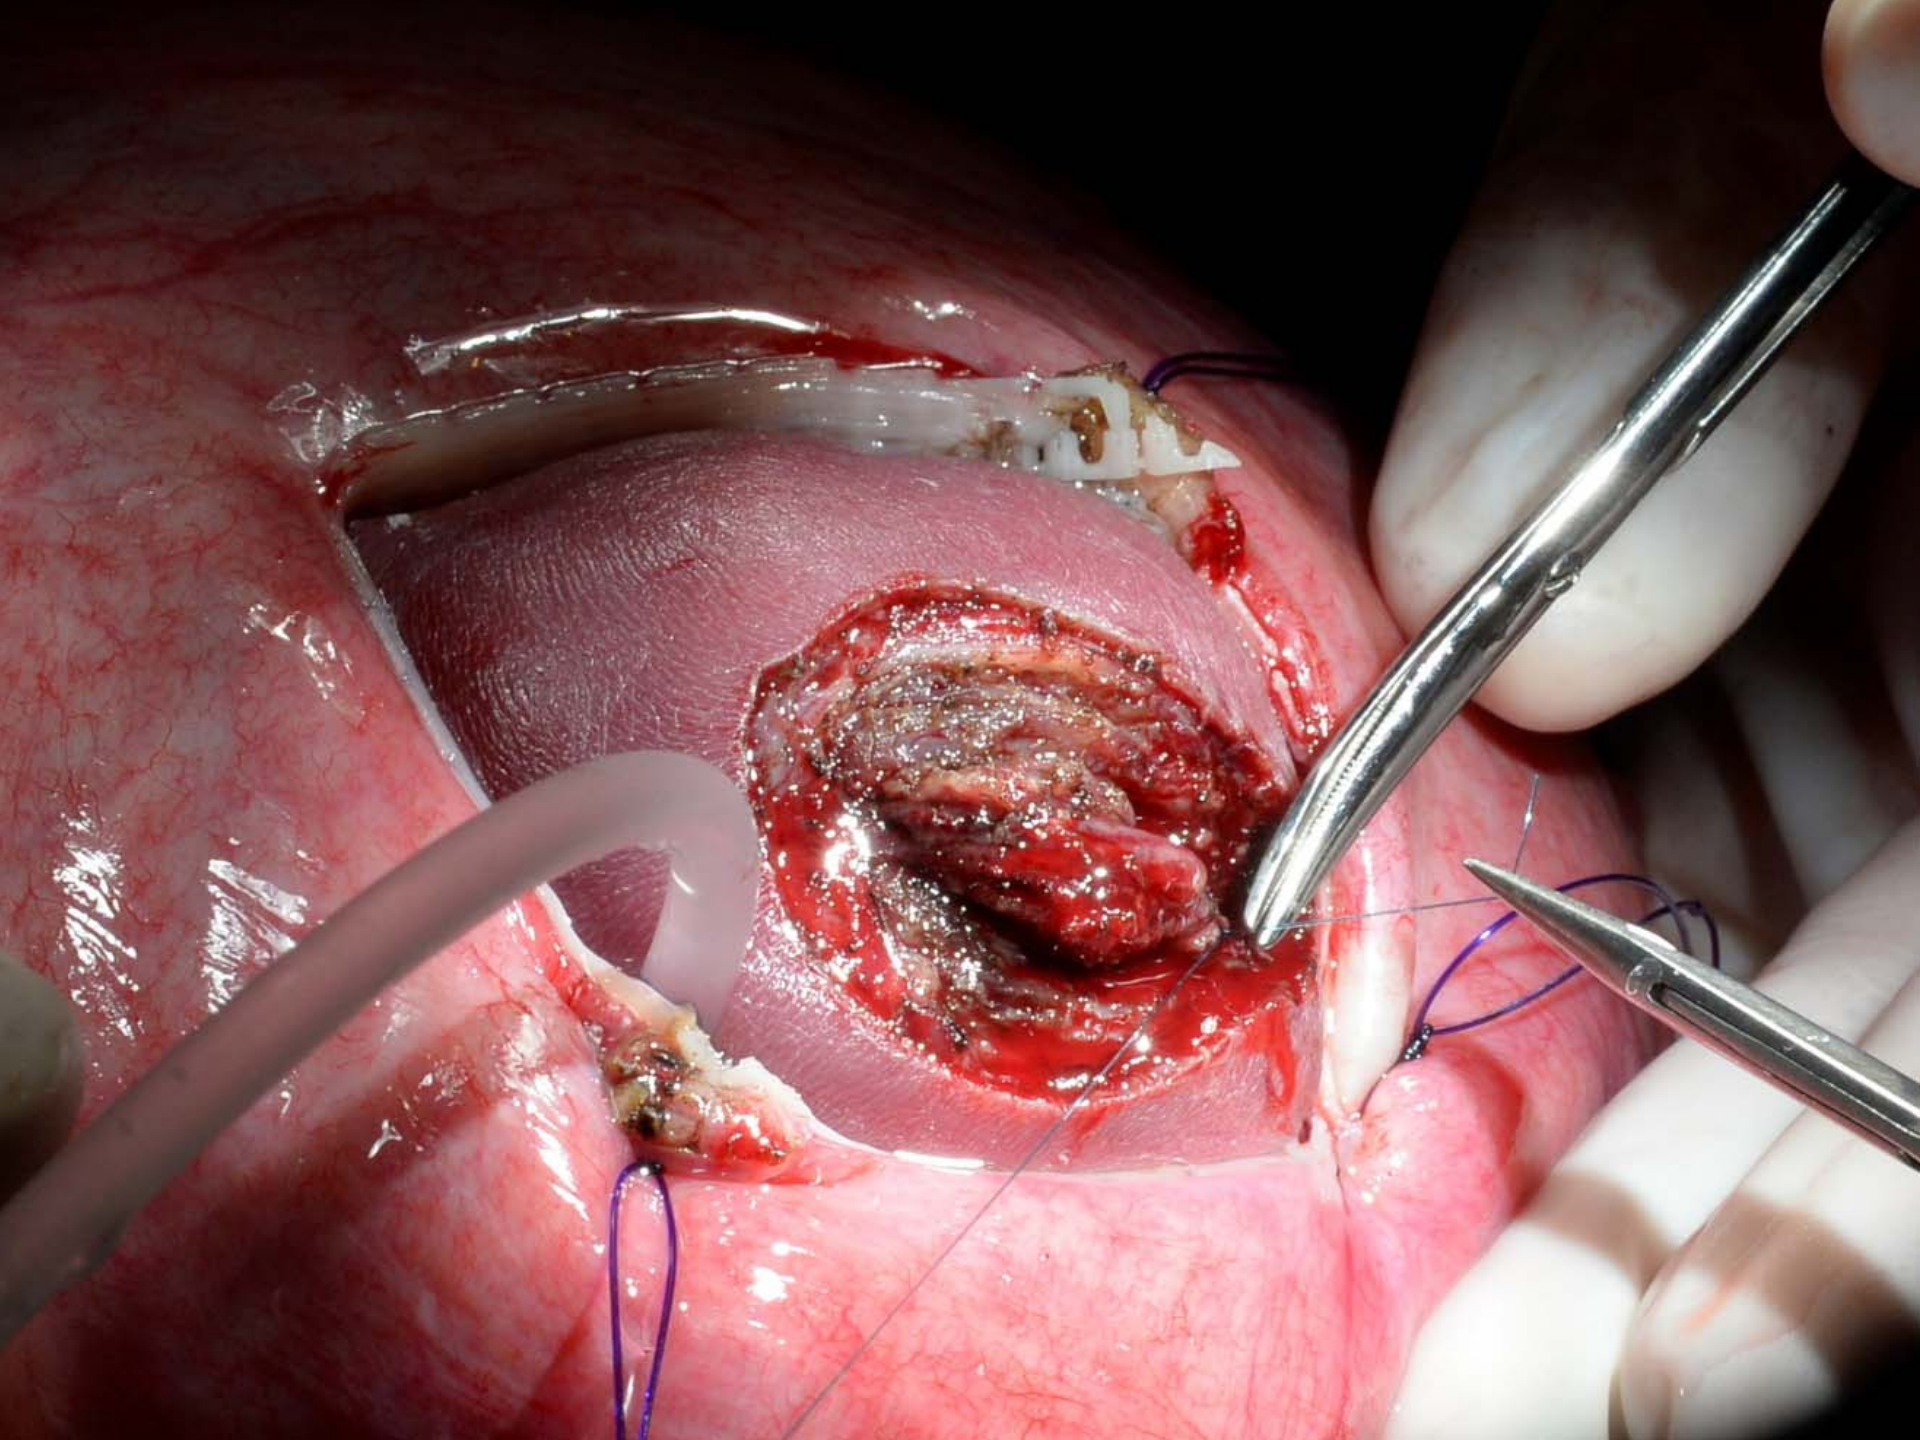

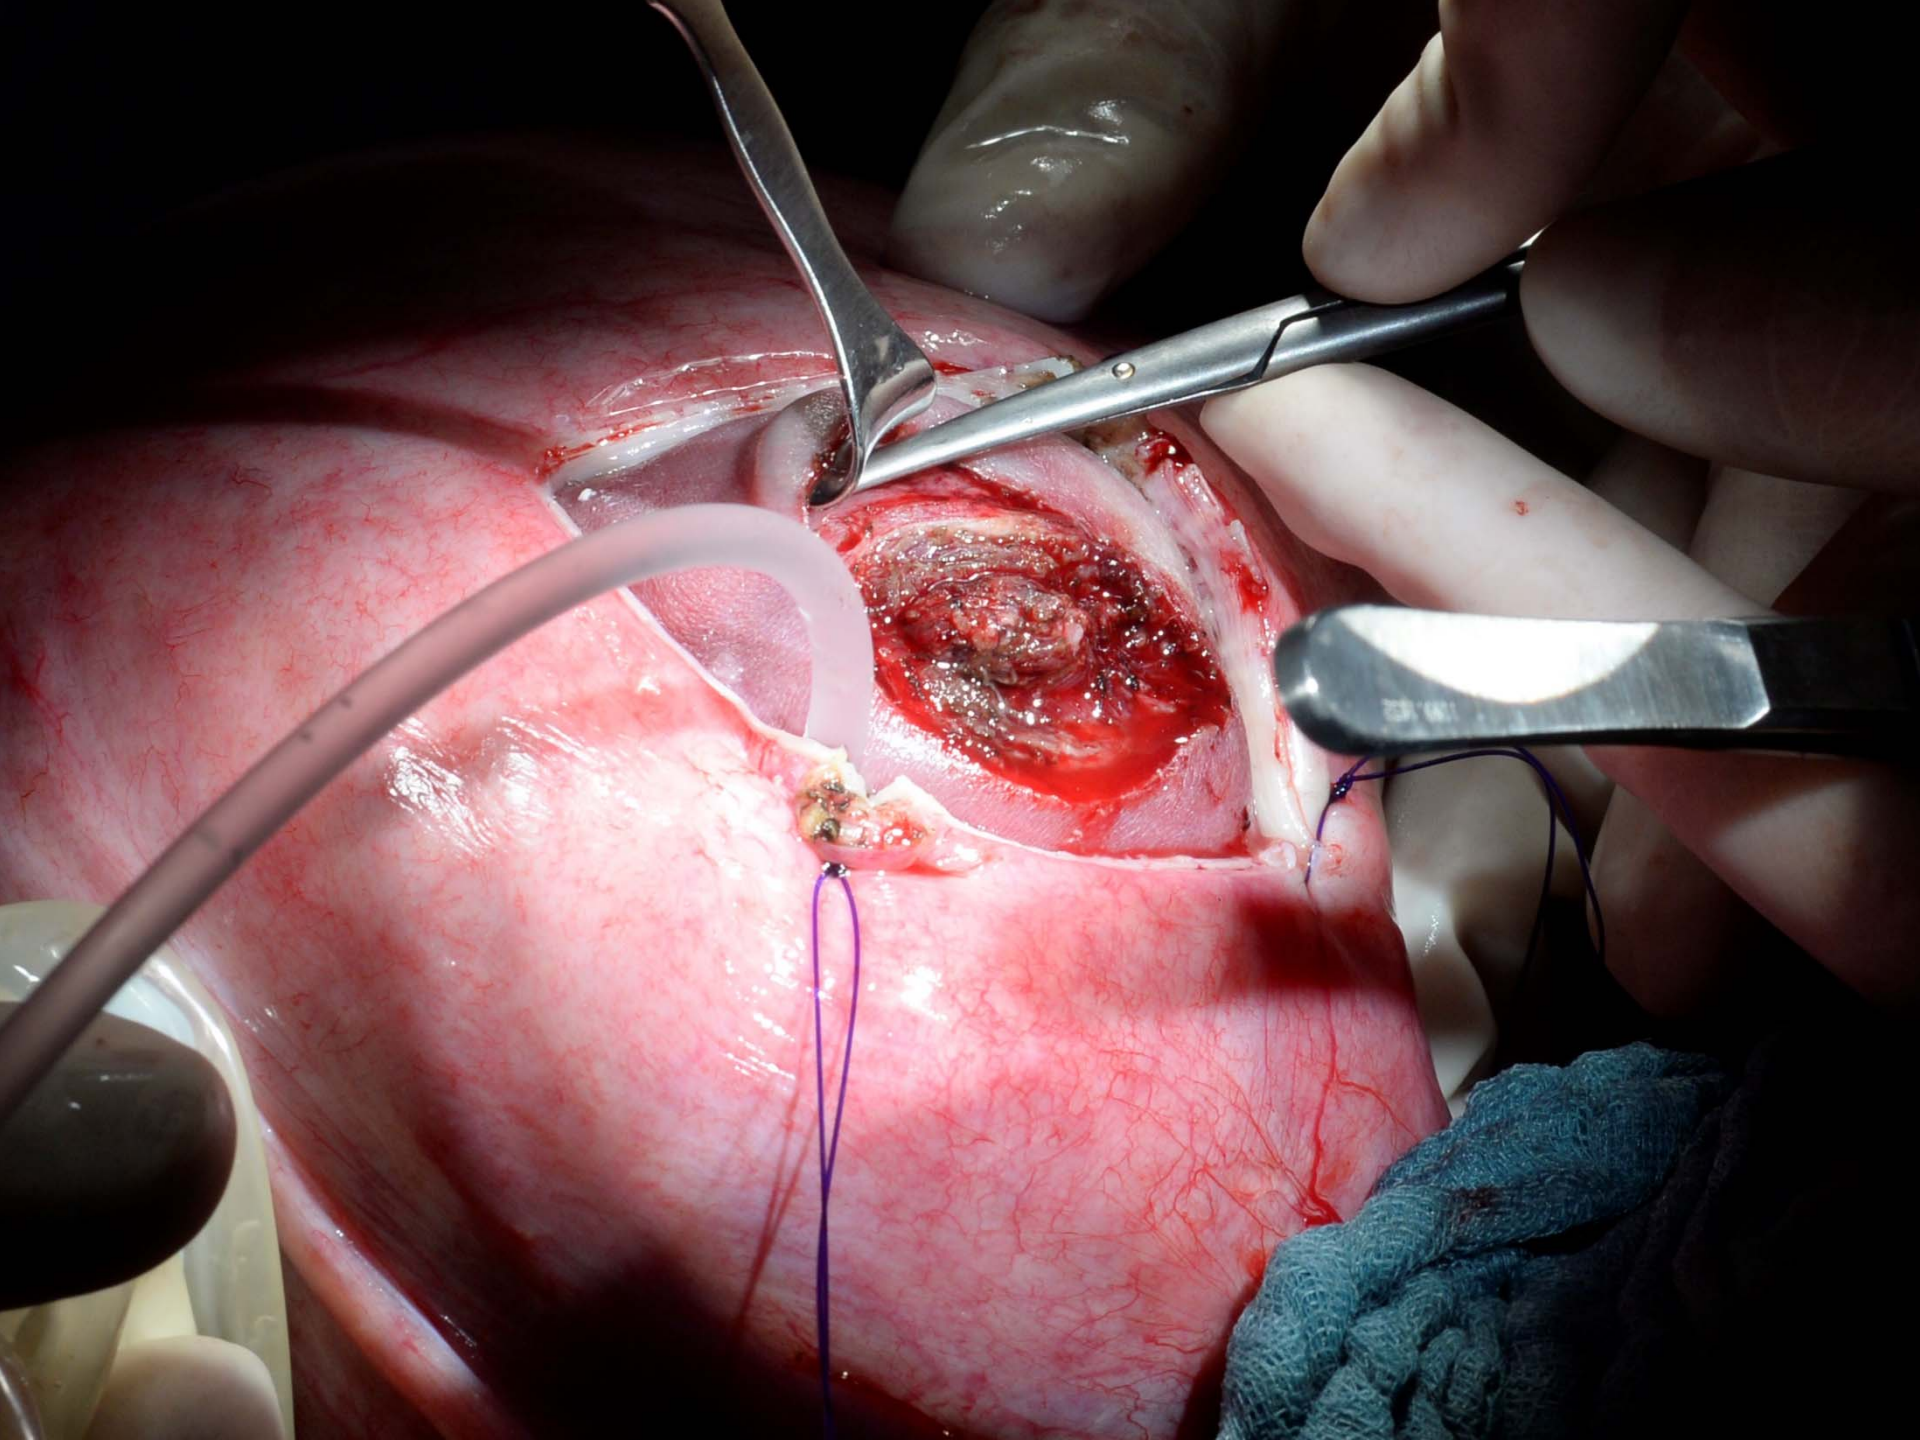

**Tubularization
of neural placode?**

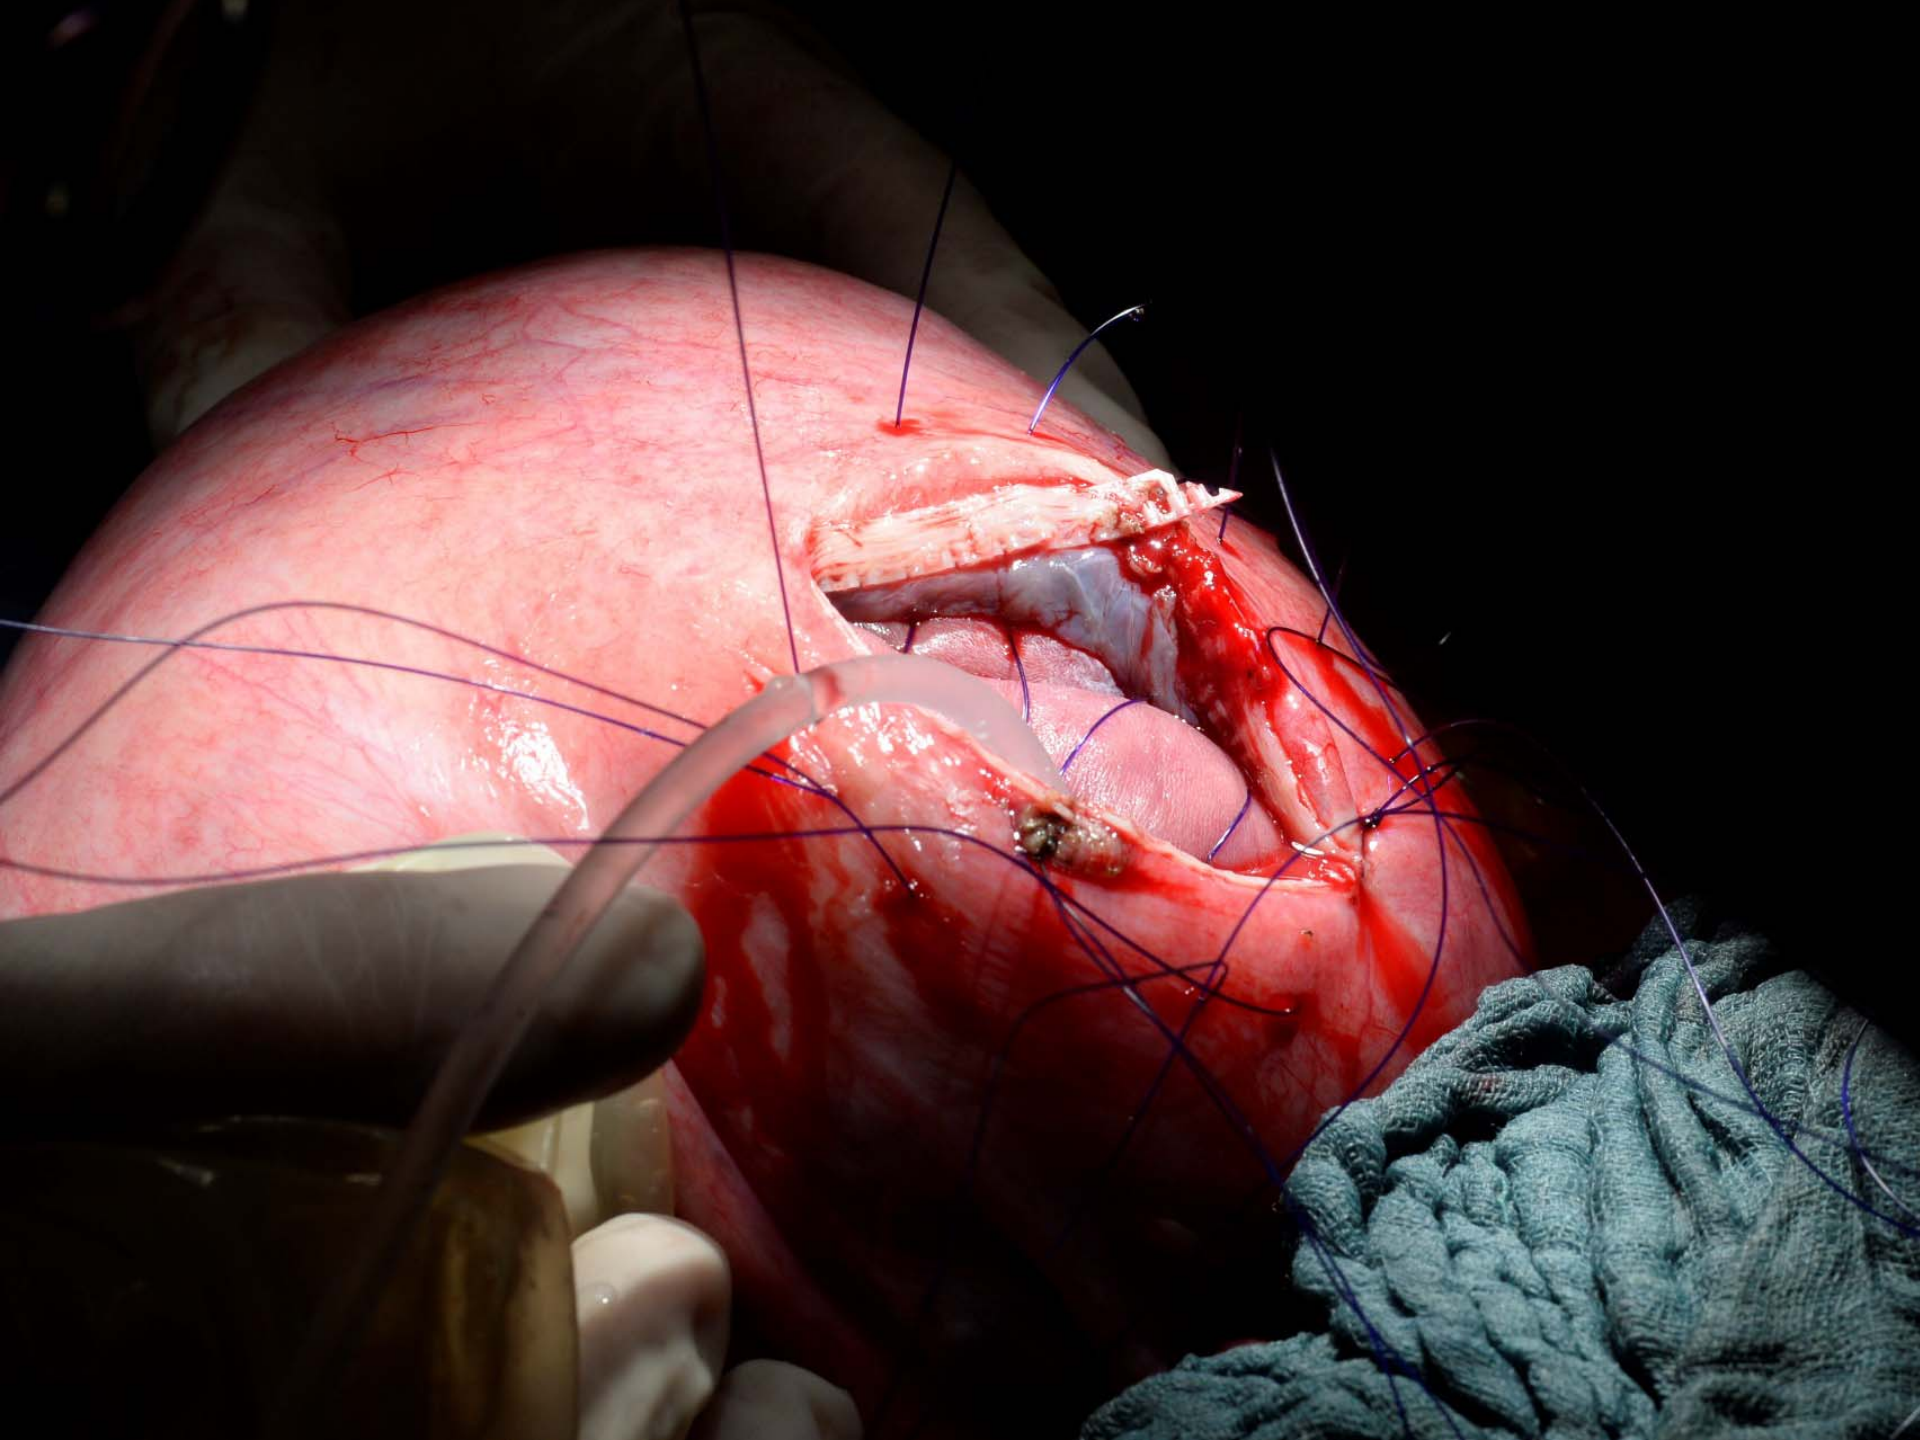

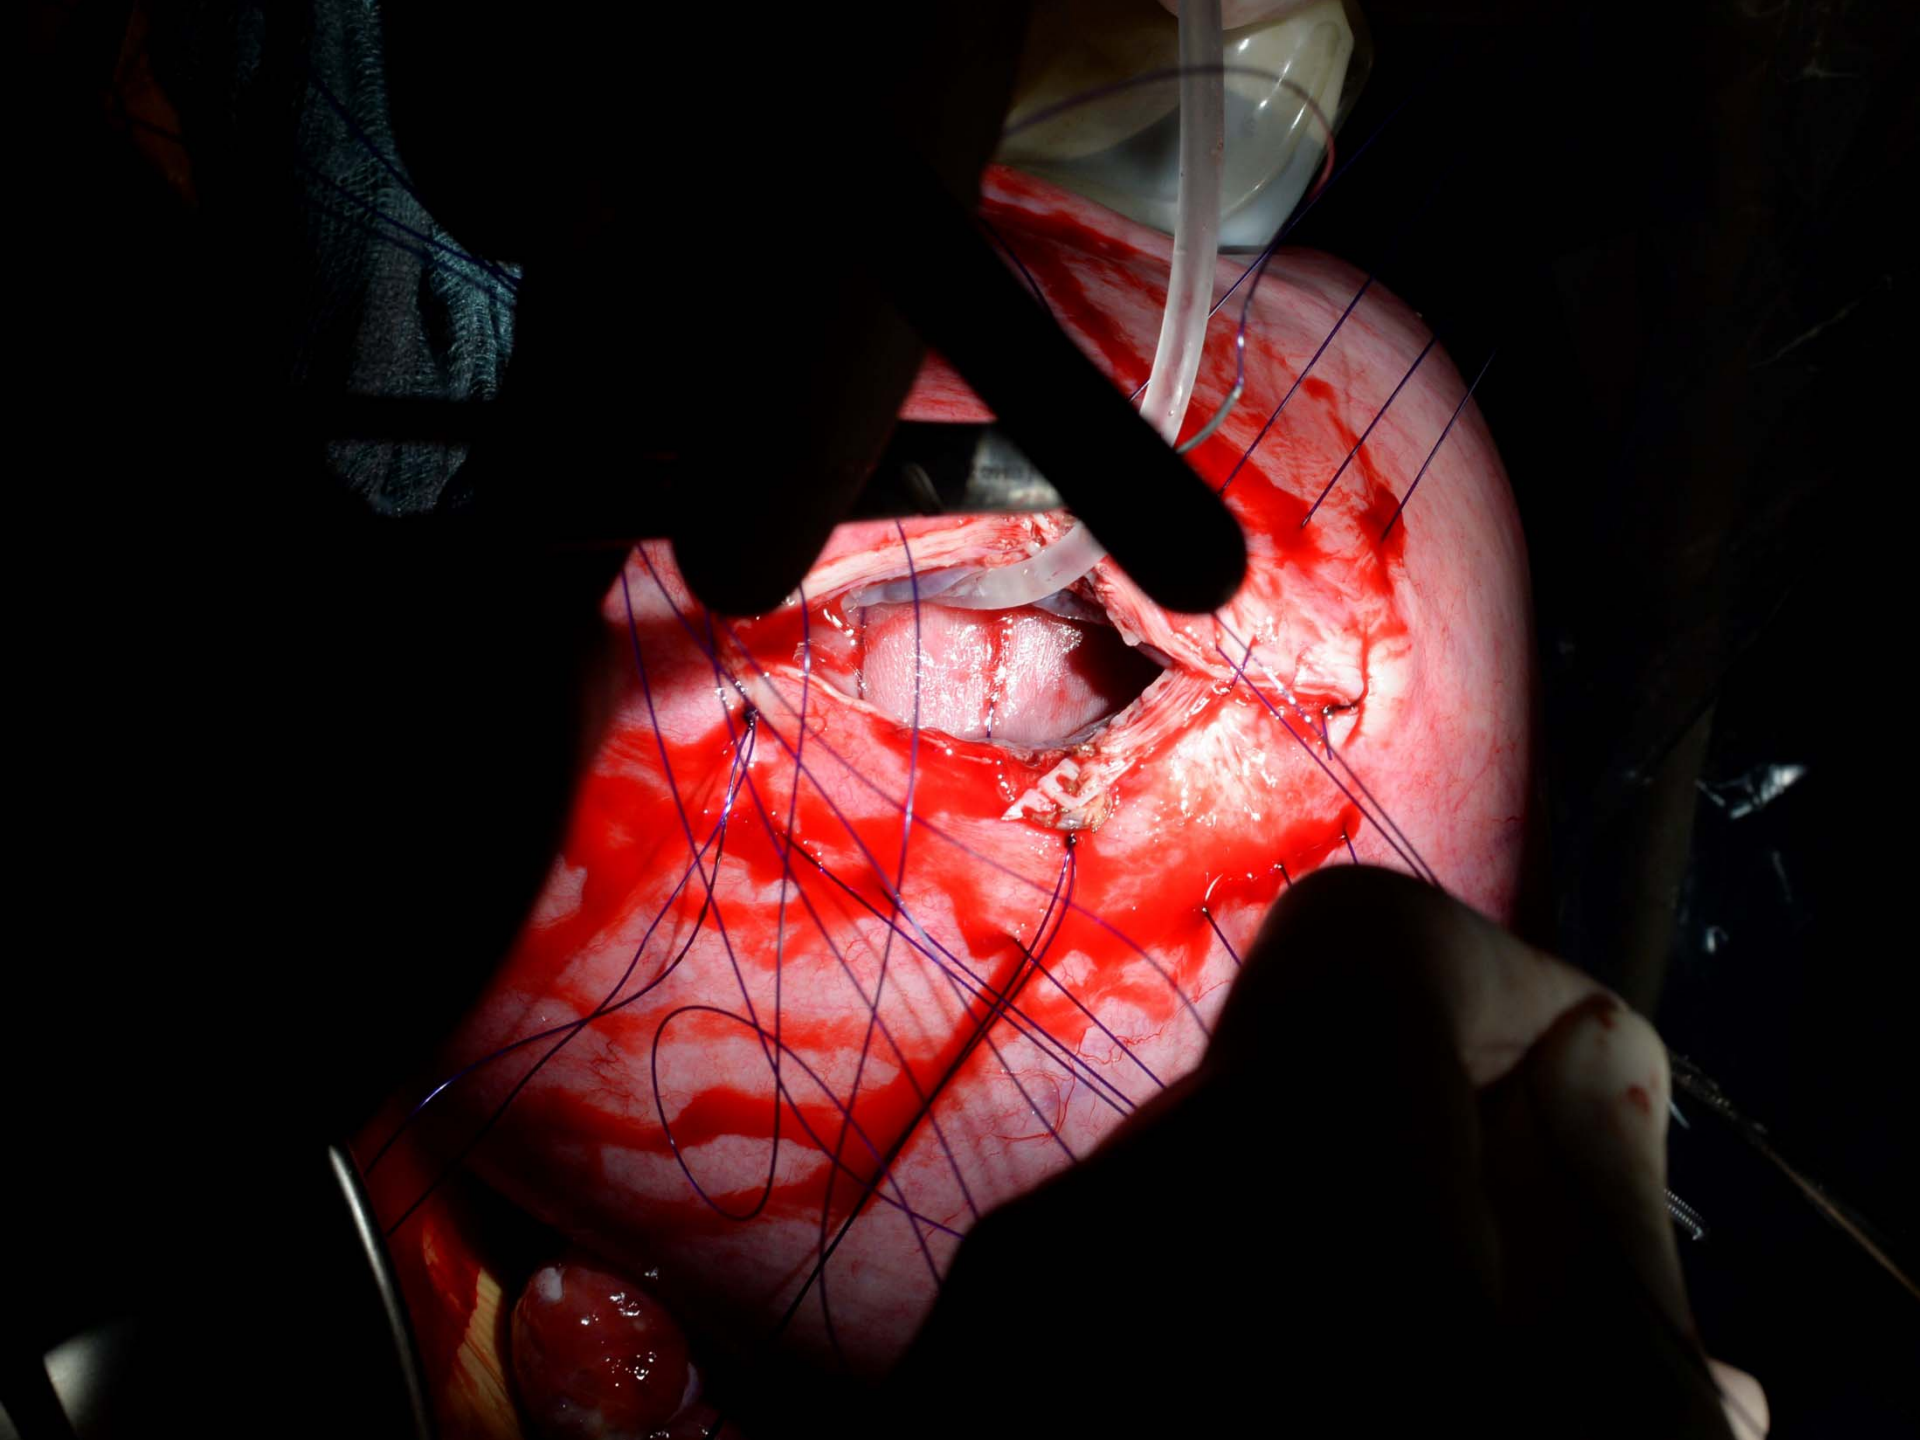

**Alloderm versus Integra for
skin closure?**

An intraoperative photograph showing a surgical procedure. A large, translucent, pinkish-red organ, likely the stomach or a large cyst, is visible on the left. A thick, yellowish, lobulated mass of omentum is being manipulated by surgical instruments. A gloved hand is visible at the top, and another gloved hand is at the bottom right holding a pair of surgical scissors. The background is dark, suggesting a surgical field.

**Omentum
necessary?**
